### FOR IMMEDIATE RELEASE

#### SUPERINTENDENT SELECTED FOR WATER FILTRATION PLANT

**Madisonville, KY**— The City of Madisonville would like to announce the advertised position for Superintendent of our Water Filtration Plant has been filled by current Wastewater Treatment Superintendent Alan Todd.

“I look forward to working with the water professionals that dedicate themselves to providing outstanding drinking water quality to the citizens of Madisonville,” said Superintendent Alan Todd. “By combining the two Superintendent positions, I will be able to implement the resources and knowledge that I have gained over the past 25 years as the Wastewater Treatment Superintendent. I will utilize these skills to ensure efficient and cost-effective management of the Water Filtration Department.”

With the combination of these two positions, it allows for the filtration and overall treatment of our water system to become more streamlined and better integrated for the benefit of our community. Alan will remain as the Superintendent for both departments and help to fully blend the two individual programs into a cohesive initiative with a plan to create further efficiencies within the coming years.

“We are excited for the opportunity to become more efficient by having one department Superintendent oversee two departments and we are thankful that Alan Todd has agreed to the task,” said Mayor Kevin Cotton. “His experience and knowledge in streamlining processes will prove beneficial to the City.”

For more information, please reach out to City Hall at (270) 824-2100.
